Criterion-wise marks

Data Understanding & Quality Checks — 5 / 20

Basic data loading and initial inspection are present, but deeper quality checks such as missing values, duplicates, join key validation, and target code verification are missing. Include these checks with summary statistics and explicit confirmation of target mapping.

Exploratory Data Analysis (EDA) — 0 / 20

No evidence of EDA is provided. Include target distribution analysis, summary statistics, and visualizations (e.g., histograms, boxplots) for clinical features to understand data patterns.

Data Cleaning & Feature Engineering — 0 / 20

No data cleaning or feature engineering steps are demonstrated. Implement missing value treatment, outlier detection/handling, and exclude identifiers from features to prevent leakage.

Linear Model Building — 0 / 20

No baseline model is built or evaluated. Develop a reproducible Logistic Regression model with stratified train-test split and preprocessing fitted only on training data.

Evaluation & Findings — 0 / 20

Evaluation metrics and findings are missing. Report confusion matrix, precision, recall, F1, ROC-AUC, and discuss false negatives and educational limitations.

Strengths

• Correctly loads and displays initial data files.
• Acknowledges the target mapping and exclusion of ID from features.
• Clear statement of milestone objectives and scope.

To improve next time

• Perform comprehensive data quality checks including missingness, duplicates, and join key validation.
• Conduct thorough EDA with visualizations and statistical summaries.
• Implement data cleaning and feature engineering steps transparently.
• Build and evaluate a Logistic Regression baseline model with proper validation.
• Report evaluation metrics and discuss findings, limitations, and false negatives.

Overall feedback

This submission provides only the initial data loading and very basic inspection without progressing into the required analyses, modeling, or evaluation for Milestone 1. To meet the milestone requirements, the participant must complete detailed data quality checks, exploratory data analysis, data cleaning, baseline model building, and evaluation with appropriate metrics and discussion. The current evidence is insufficient to award marks beyond minimal credit for initial data understanding. Further work is needed to demonstrate competency in all Milestone 1 criteria.

AI-generated evaluation against the milestone rubric. Subject to trainer review. Each submission is evaluated once; this score is recorded.
