TREDENCE AI GRADS · PROJECT EVALUATION

Participant_05

Milestone 3 · Healthcare Liver Disease
Submission:
Submission-Milestone3/Participant_M3_05_healthcare_weak.ipynb
Evaluated: 27 Oct 2026

5 / 100
Below 50% · 5%

Criterion-wise marks

Neural Network Design & Implementation — 5 / 25

The submission shows initial neural network design intent but lacks detailed architecture and reproducible training settings. To improve, provide a full documented model architecture with layer types, sizes, activation functions, and training parameters.

Data Preparation & Training — 0 / 20

Data preparation and training procedures are missing. Include clear encoding/scaling steps, leakage-aware preprocessing, and validation or regularization methods to ensure robust training.

Model Evaluation & Overfitting Analysis — 0 / 20

Evaluation on held-out data and overfitting analysis are absent. Provide confusion matrices, precision, recall, F1, ROC-AUC on test data, and compare training and validation metrics to assess overfitting.

ML vs DL Comparison — 0 / 15

No comparison between neural network and ML baseline is presented. Include side-by-side metric tables or plots on the same held-out data to fulfill this criterion.

NLP Implementation & Findings — 0 / 20

NLP tasks and findings are missing. Implement a defined NLP task using the provided healthcare education text and present valid evidence without medical advice claims.

Strengths

- Clear project and milestone identification.
- Acknowledgement of educational scope and limitations.

To improve next time

- Provide detailed neural network architecture and training settings.
- Include comprehensive data preparation and leakage prevention steps.
- Present evaluation metrics and overfitting analysis on held-out data.
- Perform and document ML vs DL model comparison on the same test set.
- Implement and report on the defined NLP task using supplied texts.

Overall feedback

The submission outlines the milestone objectives and neural network intent but lacks substantive implementation, evaluation, and NLP evidence. To meet Milestone 3 requirements, detailed neural network design, rigorous data preparation, thorough evaluation including overfitting analysis, ML vs DL comparison, and NLP task completion are necessary. The current evidence is insufficient to award marks beyond minimal credit for initial model outline.

AI-generated evaluation against the milestone rubric. Subject to trainer review. Each submission is evaluated once; this score is recorded.
