Distinction · 87%

Criterion-wise marks

Data Understanding & Quality Checks — 18 / 20

Good data loading and initial quality checks including missingness and duplicates. To improve, explicitly inspect and join all relevant lookup tables and confirm all identifiers and target coding from all supplied files as per brief.

Exploratory Data Analysis (EDA) — 17 / 20

Strong use of appropriate plots and statistics for EDA. Could be improved by including more detailed numeric summaries (means, medians, IQRs) and exploring relationships between features and target with stratified plots or boxplots.

Data Cleaning & Feature Engineering — 15 / 20

Appropriate leakage-aware preprocessing and missing value handling. To improve, include explicit outlier detection and justification, and attempt feature engineering such as interaction terms or domain-informed transformations.

Linear Model Building — 19 / 20

Well-executed baseline model with proper splitting and preprocessing. Minor improvement could be to report hyperparameter tuning or cross-validation results if done.

Evaluation & Findings — 18 / 20

Comprehensive evaluation with appropriate metrics and responsible interpretation. Could be enhanced by more detailed discussion of false negative impact and potential bias.

Strengths

• Clear and reproducible data loading and preprocessing pipeline.
• Appropriate and well-executed exploratory data analysis with relevant plots.
• Proper leakage-aware handling of missing data and categorical encoding.
• Baseline logistic regression model built with stratified splitting and class weighting.
• Comprehensive evaluation metrics reported with responsible interpretation and safety considerations.

To improve next time

• Explicit inspection and joining of all supplied lookup tables and verification of all identifiers.
• More detailed numeric summaries and stratified EDA to explore feature-target relationships.
• Additional feature engineering and explicit outlier analysis with justification.
• Inclusion of hyperparameter tuning or cross-validation for baseline model robustness.
• Deeper discussion on false negatives, bias, and limitations.

Overall feedback

The submission meets the milestone 1 requirements well, demonstrating solid data understanding, EDA, preprocessing, baseline modeling, and evaluation with responsible interpretation. It shows good awareness of safety and educational constraints. To fully meet the brief, it should incorporate all supplied lookup tables and identifiers, enhance EDA with stratified analyses, and include more feature engineering and model tuning details. Overall, this is a strong and careful Milestone 1 submission suitable for educational decision support.
