Criterion-wise marks

Data Understanding & Quality Checks — **10 / 20**

Good initial data profiling and quality checks are present, including missingness and duplicates. However, no detailed analysis of inconsistent values or data-quality risks is shown. The target variable is not set or analyzed, limiting completeness.

Exploratory Data Analysis (EDA) — **0 / 20**

No EDA is conducted or presented. Visualizations and explanations of patterns relevant to loan default are missing.

Data Cleaning & Feature Engineering — **0 / 20**

Data cleaning and feature engineering are not implemented. No rationale or leakage prevention is demonstrated.

Linear Model Building — **0 / 20**

No baseline linear model is built or validated. The notebook lacks actual model training or assumptions.

Evaluation & Findings — **0 / 20**

No evaluation metrics or findings are reported. No interpretation or limitations are discussed.

Strengths

• Initial data loading and profiling steps are clearly coded and documented.
• Explicit caution about verifying target variable and dataset before modeling.
• Clear indication of current limitations and next steps.

To improve next time

• Set and verify the target variable before proceeding with analysis.
• Perform and document thorough EDA with visualizations and class balance analysis.
• Implement data cleaning, missing value handling, and feature engineering with rationale.
• Build and evaluate a logistic regression baseline model with train/test split.
• Report relevant classification metrics and interpret results with limitations.

Overall feedback

This submission provides a well-structured initial notebook with data loading and quality checks but does not progress beyond preliminary inspection. Key Milestone 1 requirements such as EDA, data cleaning, baseline modeling, and evaluation metrics are missing or only outlined as future work. The submission is a good starting template but incomplete for Milestone 1 expectations.
