Criterion-wise marks

ML Model Development — 0 / 25

No machine learning models were developed or implemented. To improve, the participant should load the dataset, preprocess it, implement models with a proper train/test split, and provide runnable code.

Hyperparameter Tuning & Validation — 0 / 20

No hyperparameter tuning or validation was performed. The participant should implement cross-validation or other tuning methods on training data to avoid leakage and report reproducible tuning results.

Model Comparison & Performance Evaluation — 0 / 20

No model comparison or performance evaluation is provided. The participant should run models on held-out data, compute relevant metrics, and compare results to the baseline.

Risk Factor / Feature Importance Analysis — 0 / 15

Feature importance analysis is missing. The participant should analyze and interpret key risk factors and discuss their relevance and limitations.

Clustering & Borrower Segmentation — 0 / 20

No clustering or segmentation was performed. The participant should apply clustering methods, justify cluster counts, profile segments, and interpret business implications.

Strengths

• Clear initial plan to try Random Forest and Decision Tree models.
• Acknowledgement of missing evidence and caution about synthetic data.

To improve next time

• Implement and run machine learning models with proper data handling.
• Perform hyperparameter tuning with cross-validation and avoid leakage.
• Report and compare model performance metrics comprehensively.
• Conduct feature importance analysis with interpretation.
• Apply clustering for borrower segmentation with business insights.

Overall feedback

This submission is a draft with only a high-level plan and no executed analysis or results. It lacks all required evidence for Milestone 2, including model development, tuning, evaluation, interpretability, and clustering. To meet the milestone requirements, the participant must run the analyses on the approved dataset, provide reproducible code and outputs, and interpret findings responsibly.

AI-generated evaluation against the milestone rubric. Subject to trainer review. Each submission is evaluated once; this score is recorded.
